CS23532-COMPUTER NETWORKS-LAB MANUAL

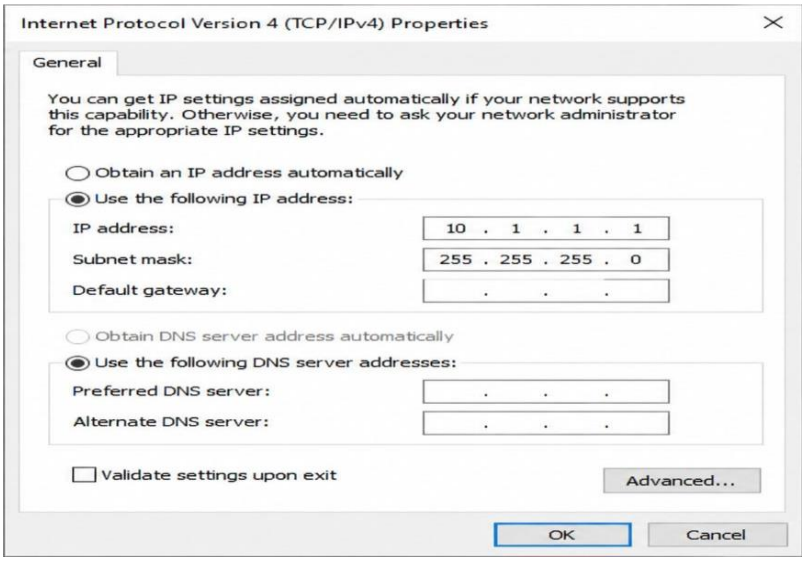

Practical -4

AIM: Setup and configure a LAN (Local area network) using a Switch and Ethernet cables in your lab.

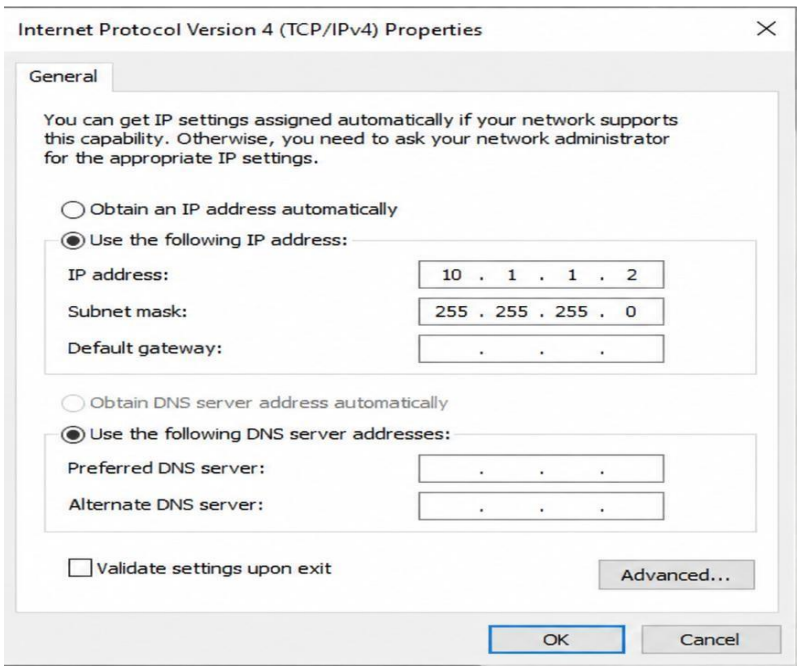

PROCEDURE

1. Open **Cisco Packet Tracer** and place the required PCs and a **Switch** in the workspace.
2. Connect all the computers to the Switch using appropriate network cables.
3. Configure suitable **IP addresses and subnet masks** for each computer in the LAN.
4. Verify the network connectivity by sending **ping packets** between the connected computers.
5. Enable and configure **file sharing** on the computers as required.
6. Access the shared files from another computer connected to the same LAN.
7. Verify that the files are successfully transferred and shared through the established LAN connection.

SCREENSHOTS

Roll no : 241501199
Name : Sherwin Richie J

Result

Thus, the **switch-based LAN was successfully configured, communication between the connected computers was verified, and file sharing was successfully performed within the network**.
